

TransitBuddy 使用手冊

香港巴士、專線小巴、嶼巴、港鐵實時到站與轉乘。預設繁體中文。本 PDF 有完整中文及英文。

無需登入。只顯示營辦商公布的實時班次；沒有就會寫沒有，不會編造到站時間或車費。

應用程式內「使用說明」是精簡版；本檔為完整手冊。畫面右上角可切換 English。

TransitBuddy 使用手冊

香港巴士、專線小巴、嶼巴與港鐵的實時到站與轉乘。預設繁體中文，可用畫面右上角切換 English。無需登入。

誠實原則：只顯示營辦商公布的實時班次；沒有就會寫沒有。沿途各站若為推算，會標明「估計」。不會編造到站時間或車費。

營辦商 / Operators

- 九巴 KMB、龍運 LWB
- 城巴 Citybus
- 新大嶼山巴士 NLB
- 專線小巴 GMB（港島 / 九龍 / 新界）
- 港鐵 MTR

這是什麼

TransitBuddy 協助你在街上快速查：這班車何時到、跟這班車何時到終點、要不要轉車、車費大約多少。涵蓋九巴 KMB、龍運 LWB、城巴 Citybus、新大嶼山巴士 NLB、專線小巴 GMB（港島 / 九龍 / 新界）、港鐵巴士，以及港鐵與輕鐵。

畫面分四頁：巴士 / 小巴到站、轉乘助手、港鐵、我的回家路線。右上角還有使用說明（本手冊的精簡版）、鐘面 / 倒數，和重新整理間隔（15 或 30 秒）。

如何搜尋路線（按查詢才搜）

在巴士 / 小巴頁輸入路線號碼，必須按「查詢」才載入。打字過程不會搜尋，避免名單在你還在輸入時跳動。港鐵巴士（例如 K12）同樣用路線號碼。

同一路線收成一張卡片。有實時班次的方向列在前面；沒有實時的收在「沒有實時班次」。九巴與城巴同一起訖會合成一列「九巴 / 城巴」。只有一個實時方向時會自動選取。

你輸入的號碼若現正有車，會排在相近號碼之上。沒有班次時會寫現在沒有車，不會用時間表假裝有車。

到站、終點、地圖與各站時間

選路線後，用可搜尋的車站名單或點地圖站號選上車站。可再選此程終點；終點只會列出上車之後的站。終點可留空，此時會跟車至路線最後一站。未選路線時可按「附近到站」用定位列出附近站柱現正公布的班次。

地圖畫在巴士 / 小巴頁，是運輸署公布走線。找不到官方走線時會說明，不會編造路徑。

會顯示開出時間、到達時間、車程（分鐘）。可展開「查看各站時間」。標了估計的時間是沿途推算，不是營辦商逐站公布。

轉乘助手：由起點到終點

必填是起點 / 上車站和終點地區，用可搜尋的車站名單選。也可按「用我的位置」。不必先選巴士路線。附近範圍是不同營辦商站柱之間最遠可步行的距離。

第一程路線和轉車站可留空。若指定路線，才會出現轉車站名單，只當作偏好：有實時班次時會列入比較，較快到達的仍會排前。指定路線現時沒有實時開出時會說明，其他選擇仍會列出。

按「找出較快班次」後，系統先用全營辦商走線圖找出直達與一次轉乘，再用實時到站收窄。到達時間與八達通車費一併比較：時間價值按法定最低工資換成分鐘，較抵的可以排前並標「遲 / 平」，不會自動改乘較平的那班。只比較現正觀察到的班次。沿途到達若為推算會標「估計」。

出門規劃（日期預設明天）用編定班距和交通估計，不是實時。可選到達時間後顯示大約出門時間；沒有該天班次就會寫沒有。沒有交通車速時只顯示編定車程，不會乘上自訂的繁忙時間倍數。

選好一程後會鎖定該班車和接駁，並繼續更新這一班的實時狀態。自動重新整理時不會改成下一班。趕不上會標明。

趕車助手與錯過代價

誤了上車站、或巴士剛開出時，按「趕這一班」。趕車助手只跟鎖定的那班車，用後面車站的實時到站（或由最近一站實時推算並標「估計」）比較步行時間與到站時間。步行一律標估計。沒有後面車站的實時（也沒有可跟的實時錨點）就不會顯示趕車列。

錯過代價不是重新搜路線：同一路線在本站的下一班實時，以及比較名單上已有、比再等同一路線更早的其他實時選擇。下一班同一路線是錯過代價，不會標成趕這一班。沒有第二個實時鐘就寫目前沒有下一班實時，不編造時間表。輕鐵只公布本站，錯過代價可以是本站下班車，不會叫你跑去下一站。

車費（接近 [hkbus.app](#)）

搜尋結果顯示全程車費。選了上車站後，顯示由該站到終點（或路線尾站）的一個八達通分段價。沿途各站旁標示由上車點到該站的價錢。

資料來自運輸署分段表。沒有該格就留空，不會猜測。實際以車費機為準。比較行程時把車費按法定最低工資（每小時 \$43.1）換成時間。

港鐵

選路線與車站，可選此程終點。港鐵只列出會經過該終點的列車，並顯示到達、車程及沿途各站。路線名單包括輕鐵。

若列車以本站為終點，會說明沒有沿途各站。馬場等不是每日服務的站，沒有車時會誠實顯示沒有。

我的回家路線（只在這部裝置）

無需登入、沒有帳戶。儲存在這部手機或電腦的瀏覽器。可從到站、轉乘或港鐵頁面按儲存，之後一按即可重開。

換瀏覽器、換手機或清除網站資料後就不會再見到。開啟已儲存的轉乘時，若上車站 / 轉車站已不合理，不會執行錯誤行程。

沒有結果時

沒有班次、沒有站名、沒有車費時，會顯示「沒有」，不會填假的分鐘數。

標了「估計」的沿途時間是推算。重新整理間隔可在右上角改為 15 或 30 秒。語言與回家路線都只存在這部裝置。

TransitBuddy user manual

Live arrivals and transfers for Hong Kong buses, green minibuses, NLB and MTR. Traditional Chinese is the default; use the header button for English. No sign-in.

Honesty: only operator-published live trips are shown. Empty means empty. Hop times marked 估計 / est. are estimates. The app does not invent ETAs or fares.

營辦商 / Operators

- 九巴 KMB、龍運 LWB
- 城巴 Citybus
- 新大嶼山巴士 NLB
- 專線小巴 GMB (港島 / 九龍 / 新界)
- 港鐵 MTR

What this app is

TransitBuddy is for the street: when the bus comes, when you arrive if you board it, whether you need a transfer, and roughly what it costs. It covers KMB, LWB, Citybus, NLB, green minibuses (Hong Kong Island / Kowloon / New Territories), MTR Bus, MTR and Light Rail.

Four tabs: bus/minibus arrivals, Transfer Buddy, MTR, and My travel home. The header also has this guide (short version), clock versus countdown, and a 15- or 30-second refresh interval.

How to search (Search button only)

On the bus/minibus tab, type a route number and tap Search. Typing does not search by itself.

Each route number is one card. Live bounds are listed first; idle ones sit behind “no live trips”. Joint KMB and Citybus of the same origin and destination appear as one KMB / Citybus row. A single live bound is picked automatically.

An exact match such as 81 is listed above 81A only when 81 is actually running. The app says there is no bus now; it does not pretend with a timetable.

Arrivals, destination, map, stop times

After a route, pick a boarding stop from the searchable selector or the map. You may pick a destination on the same trip; only later stops are offered. Leave destination empty to follow to the last stop.

The map on this tab draws the Transport Department official bus path. If no official line exists, the app says so and does not invent a path.

You get departure, arrival, travel time, and expandable times at each stop. Times marked as estimates are inferred along the route.

Transfer Buddy: stop to stop

Required fields are the starting stop and destination area, from the searchable stop list. You do not have to pick a bus route first. Nearby radius is the farthest walk between operator poles.

A first route and transfer stop are optional. Naming a route reveals the transfer-stop list as a preference: it is included when it has a live trip, but a faster arrival still ranks first. If the preferred route has no live departure, the app says so and still lists other options.

Find faster trips shortlists direct and one-transfer paths from the all-operator graph, then refines with live arrivals. Arrival and Octopus fare are scored together at Hong Kong's statutory minimum wage, so a cheaper trip

can rank first (labelled slower / cheaper) without auto-locking. Only currently observed trips are compared. Hop arrivals marked 估計 / est. are estimates.

Leave-home plan (date defaults to tomorrow) uses published headways and a traffic estimate, not live clocks. An optional arrive-by time yields an estimated leave-home clock. No trips that day stays empty. Without a traffic speed, ride time stays on the published duration — no invented peak multiplier.

After you pick an itinerary, the app locks onto those exact trips and keeps updating that trip live. It does not switch to the next bus. Connections you may miss are labelled as such.

Catch-up helper and the cost of missing it

If you missed the boarding stop or the bus just left, tap Catch this bus. Catch-up helper stays on the locked trip and compares a walk to a later pole with that vehicle's live clock (or a hop from the last live match, marked as an estimate). Walk times are always estimates. No downstream live match and no live anchor means no catch-up row.

If you miss it is regret, not a new citywide search: the next live clock of the same route at this pole, and a faster live option already on the compare list. The next bus of this route is never labelled as catching this trip. No second live clock means the app says there is no next live trip — it does not invent a timetable. Light Rail is this stop only; miss-cost can still be the next live train here.

Fares (hkbus.app style)

Search cards show the full fare. After boarding, one Octopus section fare is shown from that stop to the destination or terminus. Later stops show the fare from boarding.

Figures come from Transport Department section tables. A missing cell is omitted, never guessed. Confirm on the bus reader. Ranking converts fares into time at the statutory minimum wage (\$43.1 / hour).

MTR

Pick a line and station, optionally a destination. MTR lists only trains that serve that destination, with arrival, travel time and stop times.

A train that ends here is described as terminating. Stations that do not run every day (for example Racecourse) show empty when there is no service.

My travel home (this device only)

No sign-in and no account. Saved in this browser on this device. Save from arrivals, transfer or MTR, then reopen in one tap.

Another browser, another phone, or clearing site data will not show them. A saved transfer with an impossible boarding/interchange pair will not be run.

When results are empty

No live trip, missing fare, or missing stop name is shown as empty. Minutes are never invented.

Times marked estimate are inferred. Refresh is 15 or 30 seconds from the header. Language and homes stay on this device only.
